

FKA KLEEN - MULTI-PURPOSE CLEANER & DRAIN TREATMENT

FKA Kleen

FKA Kleen™ is a revolutionary concept in the cleaning and degreasing of aircraft galley drain systems. FKA utilizes bioremedial technology to literally "eat" fats, oil, and grease (FOG). This process uses naturally occurring, harmless micro-organisms which produce natural wetting agents to degrade and eliminate FOG components.

FKA KLEEN IS BOEING AND AIRBUS CERTIFIED.

For best results, FKA should be introduced during 'A' checks and also for daily use. Aircraft maintenance personnel call for detailed 'A' check maintenance instructions. FKA can be applied by a variety of methods including spray bottle, manual sprayer, etc. There are numerous studies that reveal potentially significant issues stemming from galley drain overflow problems. Regular use of FKA eliminates these problems.

BENEFITS:

• Safe to Use

FKA Kleen™ is a highly concentrated liquid that contains no solvents and is non-flammable. It is 100% non-harmful, non-toxic, non-caustic, non-corrosive, pH neutral and completely safe to use.

• Self Dosing

FKA Kleen™ comes in a self dosing bottle for ease of use and to reduce waste.

• Bioremedial

FKA uses naturally occurring, harmless microbes which produce natural wetting agents to degrade FOG components.

• Product Effectiveness

The effectiveness of this product and the 'speed' at which it works is determined by certain factors:

-The warmer the temperature, the faster the product will work

-The older the concentration, the longer it takes to work

FKA is designed specifically for fats, oils and greases. It will deal with any hydrocarbon introduced into the galley area. Our products are environmentally sound and dedicated to the cleaning and remediation of potentially harmful contaminants. While each product has specific applications and uses, they all share the unique ability to transform hazardous compounds into safe and disposable carbon dioxide (CO₂) and water. The process of bioremediation is listed as one of the US Environmental Protection Agency's (EPA) innovative technologies and can be accomplished in-place (In Situ) thereby eliminating the hazard and costs of "off-site" contamination. Bioremediation is a cost effective way to eliminate harmful contaminants to our environment.

FKA Kleen™ is 100% non-harmful, safe to use and has been Boeing certified to be safe for use within "airside" environments.

100% Physical Properties

Appearance: Orange liquid	Odor: Orange Citrus
Boiling Point: 212 F	Soluble in water: Complete
pH Concentrate: 6.9-7.2 pH	Diluted: 6.9-7.5
Evaporation: Same as water	

Total Bio Solution, LLC

Total Bio Solution, LLC is a distributor of bioremedial cleaning products that eliminate spills, contamination and environmental hazards utilizing eco-friendly solutions manufactured by EnviroLogic, Inc.
